

Voting System

Presented by : Anakha Jose

Understanding Voting Systems

The importance of automated voting systems

A voting system is essential for democratic processes. Automation enhances **accuracy and efficiency**, ensuring that every vote counts and reduces human error, making the electoral process smoother and more reliable.

Project Overview

Purpose and Key Features

Secure Database

This illustration symbolizes **data protection** and the importance of secure storage in a voting system.

User-Friendly Interface

The interface promotes **ease of use**, ensuring that voters can register and cast their votes without difficulties.

Efficient Voting Process

This visual highlights the **efficiency** of automated systems, demonstrating how technology facilitates timely vote counting and results.

Python Basics

Essential Concepts in Python Programming

This section covers fundamental Python programming concepts, including loops, conditions, file handling, lists, and user input validation, which are crucial for developing an automated voting system efficiently.

Voting Process Flow

Voter ID Input

Users enter their voter ID for authentication.

Choose Candidate

Voters select their preferred candidate from the list.

Store Vote

The system records the vote securely in the database.

Display Results

Final results are displayed after voting concludes.

Code Explanation

Key Sections of the System

This section details essential code components, including **candidate setup**, the voting loop, and **invalid input checks**. Understanding these aspects is crucial for grasping the system's functionality and reliability.

Sample Output

User Interaction and Feedback

The console output of the voting system provides users with a seamless experience. When a voter logs in using their voter ID, they are greeted with a prompt confirming their identity. As the voter selects their candidate, the system provides immediate feedback, confirming their choice with messages like "Vote confirmed for nominee1."

After completing the voting process, a thank-you message is displayed: "Thank you for participating in the election!" This clear communication enhances user satisfaction and trust in the system.

The interface is designed to be intuitive, ensuring that users navigate through the voting process with confidence. The outputs effectively represent the system's reliability and user-friendly nature, reinforcing the project's goal of simplicity and security.

Code and Output

Side-by-Side Comparison of Examples

```
# First we will take input of what nominee what we want to keep
nominee1 = input("Enter the name of 1st nominee: ")
nominee2 = input("Enter the name of 2nd nominee: ")

# Initially vote count for both must be 0
nm1_votes = 0
nm2_votes = 0

voter_id = [1,2,3,4,5,6,7,8,9,10]

no_of_voter = len(voter_id)

while True:
    if voter_id == []: # to check when voter list is compleated
        print("Voting session is over !!!")
        if nm1_votes > nm2_votes:
            percent = (nm1_votes/no_of_voter)*100 # to calculate the percentage
            print(nominee1,"has won the election with",percent,"% of votes")
            break # to get rid of infinite loop
        elif nm2_votes > nm1_votes:
            percent = (nm2_votes/no_of_voter)*100
            print(nominee2,"has won the election with",percent,"% of votes")
            break
        else:
            print("Both have equal number of votes !!! Government will decided who will rule")
            break
```

```
voter = int(input("Enter your voter id: "))
if voter in voter_id:
    print("You are a voter")
    voter_id.remove(voter) # we will remove so that again same voter can't vote
    print("-----")
    print("To give vote to ", nominee1,"press 1")
    print("To give vote to ", nominee2,"press 2")
    print("-----")
    vote=int(input("Enter your precious vote : "))
    if vote == 1:
        nm1_votes +=1
        print(nominee1,"Thank you to give your important vote to them !!")
    elif vote == 2:
        nm2_votes +=1
        print(nominee2,"Thank you to give your important vote to them !!")
    elif vote > 2:
        print("Check your pressed key !!")
    else:
        print("You are not a voter OR You have already voted !!!")
```

OUTPUT

```
Enter the name of 1st nominee: Farsana
Enter the name of 2nd nominee: Anakha
Enter your voter id: 1
You are a voter
-----
To give vote to Farsana press 1
To give vote to Anakha press 2
-----
Enter your precious vote : 1
Farsana Thank you to give your important vote to them !!
Enter your voter id: 2
You are a voter
-----
To give vote to Farsana press 1
To give vote to Anakha press 2
-----
Enter your precious vote : 1
Farsana Thank you to give your important vote to them !!
Enter your voter id: 3
You are a voter
-----
To give vote to Farsana press 1
To give vote to Anakha press 2
-----
Enter your precious vote : 1
Farsana Thank you to give your important vote to them !!
Enter your voter id: 4
You are a voter
-----
To give vote to Farsana press 1
To give vote to Anakha press 2
-----
Enter your precious vote : 1
Farsana Thank you to give your important vote to them !!
Enter your voter id: 5
You are a voter
-----
To give vote to Farsana press 1
To give vote to Anakha press 2
-----
```

```
-----
To give vote to Farsana press 1
To give vote to Anakha press 2
-----
Enter your precious vote : 2
Anakha Thank you to give your important vote to them !!
Enter your voter id: 7
You are a voter
-----
To give vote to Farsana press 1
To give vote to Anakha press 2
-----
Enter your precious vote : 3
Check your pressed key !!
Enter your voter id: 8
You are a voter
-----
To give vote to Farsana press 1
To give vote to Anakha press 2
-----
Enter your precious vote : 2
Anakha Thank you to give your important vote to them !!
Enter your voter id: 9
You are a voter
-----
To give vote to Farsana press 1
To give vote to Anakha press 2
-----
Enter your precious vote : 2
Anakha Thank you to give your important vote to them !!
Enter your voter id: 10
You are a voter
-----
To give vote to Farsana press 1
To give vote to Anakha press 2
-----
Enter your precious vote : 1
Farsana Thank you to give your important vote to them !!
Voting session is over !!!
Farsana has won the election with 50.0 % of votes
```

70%

win

nominee1 recieved 70% of the vote.
nominee1 won the election.

30%

Remaining Votes

nominee2 received 30% of the vote

Conclusion

Benefits of the Voting System

This project demonstrates improved accuracy through automation, enhances system reliability, and highlights potential for future improvements, ensuring a more effective voting experience for all users.

Future Enhancements

GUI Version

Developing a graphical user interface will enhance user experience, making the voting process more intuitive and accessible for all participants, thus encouraging greater public engagement in elections.

Multi-Candidate Support

Expanding the system to accommodate multiple candidates will diversify the voting options available, making elections more representative of voter preferences and enhancing democratic participation in the electoral process.

Database Connectivity

Integrating a database will allow for efficient data management and retrieval, ensuring the system can handle larger voter populations while maintaining security and data integrity throughout the process.

Enhanced Security

Implementing stronger security measures, such as encryption and two-factor authentication, will safeguard voter information and prevent unauthorized access, ensuring the integrity and trustworthiness of the voting system.

Admin Dashboard

An admin dashboard will provide election officials easy access to monitor voting activities, manage user accounts, and analyze voting data, streamlining administrative tasks and improving election oversight.

THANK YOU

Thank You,
I sincerely appreciate your time and guidance throughout this project.
Your evaluation helps me learn and improve.
